PROFILE

Software Engineer specializing in scalable, high-performance systems, cloud-native architectures, and backend development. Applied expertise in designing and optimizing **distributed systems** using **Java, Python, Spring Boot, and ReactJS**. Developed and deployed solutions leveraging **Google Cloud Platform (GCP), AWS, and AI/ML frameworks (TensorFlow, Scikit-Learn)** to accelerate efficiency and innovation.

EDUCATION

Master of Computer Science Illinois Institute of Technology, Chicago, IL	AUG. 2022 – AUG. 2024
Bachelor of Technology Usha Mittal Institute of Technology, Mumbai, India	JUN. 2015 – APR. 2019

SKILLS

- **Programming & Markup Languages:** Java, Python, Dart, JavaScript, SQL, HTML5, CSS3
- **Cloud & DevOps:** Google Cloud Platform (GCP), AWS, Docker, Kubernetes, CI/CD (GitHub Actions)
- **Developer & AI/ML Tools:** MySQL, MongoDB, Neo4J, TensorFlow, Scikit-Learn
- **Frameworks:** Spring Boot, JDBC, REST API, Microservices, Kafka, Node.js, ReactJS, Flutter, Hadoop MapReduce
- **Data Structures & Algorithms:** Sorting, Searching, Dynamic Programming, Graphs, Trees, Hashing, Greedy Algorithms, Backtracking

EXPERIENCE

SENIOR TECHNOLOGY ASSOCIATE

Colgate Global Business Services Pvt. Ltd., Mumbai, India	JULY 2019 - JUNE 2022
• Developed and implemented an automated job monitoring system using Google Apps Script, accelerating the tracking of 30,000+ daily SAP jobs and reducing manual workload by 90% (45 minutes/day). Achieved a 15% decrease in incident tickets while boosting operational efficiency 3x. • Directed the deployment of a demand sensing algorithm across the Asia-Pacific region, optimizing inventory planning by forecasting trends and automating sales orders. Improved 6-week forecast accuracy by 20%. • Consolidated North and Latin American SAP R/3 systems into a unified SAP S/4HANA platform, enhancing data storage efficiency by 40% and reducing query execution time by 30%. • Designed and implemented automation solutions using UiPath, reducing manual work by 200+ hours/month. Established optimized workflows for MRP controller setup and timestream regeneration. • Led the automation of year-end activities in global SAP systems, including fiscal year changes and calendar synchronization, reducing daily workload by 35% (10 tickets) and improving year-end process efficiency 3.5x. • Managed and assessed SAP extraction and IBP job changes during the transition to SAP S/4HANA, reducing downtime and ensuring a seamless migration with minimal business disruption.	

PROJECTS

- **Scalable E-commerce Platform:** Developed a **scalable full-stack e-commerce application** using **Java, Node.js, ReactJS, Spring Boot, and MongoDB**, serving **100K+ users/month**. Achieved **25% improvement in server response time** through optimized data handling. Deployed on **AWS EC2 with Kubernetes** for efficient scaling.
- **AI-Powered Emergency Blood Donation System:** Designed and implemented an **AI-powered blood donation management platform** using **Spring Boot, MySQL, and Google App Engine**, reducing emergency response times by **70%**. Applied **TensorFlow-based predictive modeling** to anticipate blood demand.

ACHIEVEMENTS

- Accomplished the highest resolution rate of **support tickets in 2021**.
- Awarded "**Rising Star**" for **initiating and leading the Job Monitoring Sheet Automation project in 2020**.
- Received the **Operational Excellence and Technology & Innovation Excellence Award** for automating critical business processes and optimizing **SAP system performance**.
